About this User's Guide

What you will learn from this user's guide

This user's guide describes the Measurement Computing USB-SSR08 data acquisition device and lists device specifications.

Conventions in this user's guide

For more information
Text presented in a box signifies additional information and helpful hints related to the subject matter you are reading.

Caution! Shaded caution statements present information to help you avoid injuring yourself and others, damaging your hardware, or losing your data.

Bold text is used for the names of objects on a screen, such as buttons, text boxes, and checkboxes.

Italic text is used for the names of manuals and help topic titles, and to emphasize a word or phrase.

Where to find more information

Additional information about the USB-SSR08 is available on our website at www.mccdaq.com. You can also contact Measurement Computing Corporation by phone, fax, or email with specific questions.

- Knowledgebase: kb.mccdaq.com
- Tech support form: www.mccdaq.com/support/support_form.aspx
- Email: techsupport@mccdaq.com
- Phone: 508-946-5100 and follow the instructions for reaching Tech Support

For international customers, contact your local distributor. Refer to the International Distributors section on our website at www.mccdaq.com/International.
Chapter 1

Introducing the USB-SSR08

The USB-SSR08 is a USB 2.0 full-speed device that provides the following features:

- Mounting rack for eight solid state relay (SSR) modules (backplane is divided into two groups of four modules each).
- Onboard switch to configure the module type (input or output) for each module group.
  
- The following configurations are supported (you cannot mix input and output modules within a group):
  - Four input and four output modules
  - Eight input modules
  - Eight output modules
- Onboard switch to configure the control logic polarity (active high or low) for each module group.
- Onboard switch to configure the power-up state for output modules.
- Switch settings can be read back with software.
- Independent LEDs at each module position to indicate the on/off status of each module.
- Eight pairs of screw terminal banks for field wiring connections, with positive (+) and negative (-) relay contacts brought out to the terminals.
- USB out and power out connections support powering and controlling multiple MCC USB devices from one external power source and one USB port in a daisy-chain configuration.*
- Rugged enclosure that can mount on a DIN rail or on a bench

The USB-SSR08 is powered by an external 9 V, 1 A regulated power supply that is shipped with the device.

The USB-SSR08 is fully compatible with both USB 1.1 and USB 2.0 ports. Revision F and later devices are also compatible with USB 3.0 ports.

Compatible SSR modules

The USB-SSR08 has locations for eight solid state relay modules. The SSR modules use a standard color scheme so you can quickly identify what module type is installed. Mounting screw threads are provided for you to easily install the SSR modules.

MCC offers the following SSR modules that are compatible with the USB-SSR08:

- SSR-IAC-05
- SSR-IAC-05A
- SSR-IDC-05
- SSR-IDC-05NP
- SSR-OAC-05
- SSR-OAC-05A
- SSR-ODC-05
- SSR-ODC-05A
- SSR-ODC-05R

Details on these SSR modules are available at www.mccdaq.com/products/signal_conditioning.aspx.

Remove the USB-SSR08 from the enclosure to install SSR modules

Remove the USB-SSR08 from the enclosure to access the solid-state relay module mounting positions.

* Depending on your load requirements, daisy chained devices may require a separate power supply.
Functional block diagram

USB-SSR08 functions are illustrated in the block diagram shown here.

Figure 1. USB-SSR08 functional block diagram
Chapter 2

Installing the USB-SSR08

Unpacking

As with any electronic device, you should take care while handling to avoid damage from static electricity. Before removing the device from its packaging, ground yourself using a wrist strap or by simply touching the computer chassis or other grounded object to eliminate any stored static charge.

Contact us immediately if any components are missing or damaged.

Installing the software

Refer to the MCC DAQ Quick Start and the USB-SSR08 product page on our website for information about the software supported by the USB-SSR08.

Install the software before you install your device

The driver needed to run the USB-SSR08 is installed with the software. Therefore, you need to install the software package you plan to use before you install the hardware.

Installing the hardware

Before you connect the USB-SSR08 to your computer, connect the external power supply that was shipped with the device.

You can connect up to four compatible MCC USB Series devices in a daisy chain configuration to a single USB 2.0 port on your computer. If your system has a USB 1.1 port, you can connect up to two MCC USB Series devices.

Configuring the hardware switches

The USB-SSR08 has three onboard switches that configure the I/O module type, relay logic polarity, and relay power-up state. Configure these switches before you connect the external power supply to the USB-SSR08. Factory-configured default settings are listed in the table below. Refer to Figure 6 on page 11 for the location of each switch.

<table>
<thead>
<tr>
<th>PCB label</th>
<th>Description</th>
<th>Default setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN OUT (S1)</td>
<td>Configures the I/O type per module group for input or output.</td>
<td>OUT (output)</td>
</tr>
<tr>
<td>NON INVERT INVERT</td>
<td>Configures the relay logic parity per module group for invert or</td>
<td>NON INVERT (active low)</td>
</tr>
<tr>
<td>(S2)</td>
<td>non-invert logic.</td>
<td></td>
</tr>
<tr>
<td>P/UP P/DN (S3)</td>
<td>Configures the power-up state of output relays for pull-up or pull-</td>
<td>P/UP (Pull-up)</td>
</tr>
<tr>
<td></td>
<td>down.</td>
<td></td>
</tr>
</tbody>
</table>

Each DIP switch configures one module group. The switch labeled CL configures modules 1 through 4, and the switch labeled CH configures modules 5 through 8.

![Typical PCB switch](image)

You can use InstaCal to read the current configuration of each switch.
Remove from the enclosure to access the onboard switches

To change the configuration of a switch, you must first remove the USB-SSR08 from the enclosure. Turn external power off before changing the switch settings.

I/O module type

Use switch S1 to configure the type of each module group for input or output. By default, switch S1 is shipped with all banks configured for output modules, as shown in Figure 3.

![Figure 3. I/O module type switch (S1)](image)

You cannot mix input and output modules within a group.

Control logic polarity

Configure switch S2 to set the control logic polarity for each module group for inverted (active high) or non-inverted (active low, default) logic. By default, switch S2 is shipped with all banks configured for non-inverted logic, as shown in Figure 4.

![Figure 4. Relay logic switch (S2)](image)

- For input modules, invert mode returns a "1" when the modules are active. Non-invert mode returns a "0" when the modules are active.
- For output modules, invert mode allows you to write a "1" to activate the module. Non-invert mode allows you to write a "0" to activate the module.

Relay power-up state

Configure switch S3 to set the state of the output relays at power-up. By default, switch S3 is shipped with all banks configured for pull-up (modules inactive on power-up), as shown in Figure 5. When switched to PULL DN (pull-down), modules are active on power-up. Switch settings can be read back via software.

![Figure 5. Relay power-up state switch (S3)](image)
Connecting the external power supply

Power to the USB-SSR08 is provided with the 9 V, 1 A external power supply (CB-PWR-9). Connect the external power supply before connecting the USB connector to the USB-SSR08.

To connect the power supply to your USB-SSR08, complete the following steps:

1. Connect the external power cord to the power connector labeled **POWER IN** on the USB-SSR08 enclosure (**PWR IN** on the PCB).
2. Plug the AC adapter into a power outlet.

The **PWR** LED turns on (green) when 9 V power is supplied to the USB-SSR08. If the voltage supply is less than 6.0 V or more than 12.5 V, the PWR LED does not turn on.

### Do not connect external power to the POWER OUT connector

The power connector labeled **POWER OUT** on the enclosure (**PWR OUT** on the PCB) is used to provide power to an additional MCC USB Series device. If you connect the external power supply to the **POWER OUT** connector, the USB-SSR08 does not receive power, and the **PWR** LED does not turn on.

Connecting the USB-SSR08 to your system

To connect the USB-SSR08 to your system, do the following.

1. Turn your computer on.
2. Connect the USB cable to the USB connector labeled **USB IN** on the USB-SSR08.
3. Connect the other end of the USB cable to a USB port on your computer or to an external USB hub that is connected to your computer.

Windows finds and installs the device driver automatically, and notifies you that the device is ready to use.

When installation is complete, the **USB** LED flashes and then remains lit to indicate communication is established between the USB-SSR08 and the computer. Refer to Figure 6 on page 11 for the location of the **USB** LED.

### If the USB LED turns off

If communication is lost between the device and the computer, the **USB** LED turns off. To restore communication, disconnect the USB cable from the computer and then reconnect it. This should restore communication, and the **USB** LED should turn on.

### If the system does not detect the USB-SSR08

If a USB device not recognized message displays when you connect the USB-SSR08, complete the following steps:

1. Unplug the USB cable from the USB-SSR08.
2. Unplug the external power cord from the **POWER IN** connector on the enclosure.
3. Plug the external power cord back into the **POWER IN** connector.
4. Plug the USB cable back into the USB-SSR08.

Your system should now properly detect the USB-SSR08.

Contact technical support if your system still does not detect the USB-SSR08.

### Caution!

Do not disconnect any device from the USB bus while the computer is communicating with the USB-SSR08, or you may lose data and/or your ability to communicate with the USB-SSR08.
Chapter 3

Functional Details

Components

The USB-SSR08 has the following internal components, as shown in Figure 6.

- Two (2) USB connectors
- Two (2) external power connectors
- PWR LED
- USB LED
- I/O module type switch (S1)
- Control logic polarity switch (S2)
- Power-up state configuration switch (S3)
- Screw terminals (eight pairs) and module status LEDs

Figure 6. USB-SSR08 components
USB in connector

The USB in connector is labeled USB IN on the enclosure and on the PCB. This connector is a USB 2.0 full-speed input connector that you connect to the USB port on your computer (or USB hub connected to your computer). This connector supports USB 1.1, USB 2.0 devices.

USB out connector

The USB out connector is labeled USB OUT on the enclosure and on the PCB. This connector is a downstream hub output port intended for use with other MCC USB devices only. The USB hub is self-powered, and can provide 100 mA maximum current at 5 V. For information on daisy chaining to other MCC USB devices, refer to Daisy chaining multiple USB-SSR08 devices on page 14.

External power connectors

The USB-SSR08 has two external power connectors labeled POWER IN and POWER OUT on the enclosure. The POWER IN connector is labeled PWR IN on the PCB, and the POWER OUT connector is labeled PWR OUT on the PCB.

Connect the POWER IN connector to the supplied +9 V external power supply. External power is required to operate the USB-SSR08. The POWER OUT connector lets you power additional daisy-chained MCC USB devices from a single external power supply. Depending on your load requirements, daisy-chained devices may require a separate power supply. Refer to Power limitations using multiple USB-SSR08 devices on page 15 for more information.

USB LED

The USB LED indicates the communication status of the USB-SSR08. This LED uses up to 5 mA of current and cannot be disabled. The table below explains the function of the USB LED.

<table>
<thead>
<tr>
<th>USB LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>On steadily</td>
<td>The USB-SSR08 is connected to a computer or external USB hub.</td>
</tr>
<tr>
<td>Blinking</td>
<td>Initial communication is established between the USB-SSR08 and the computer, or data is being transferred.</td>
</tr>
</tbody>
</table>

PWR LED

The USB-SSR08 incorporates an onboard voltage supervisory circuit that monitors the external 9 V power. If the input voltage falls outside of the specified ranges the PWR LED shuts off. The table below explains the function of the PWR LED.

<table>
<thead>
<tr>
<th>PWR LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Steady green</td>
<td>External power is supplied to the USB-SSR08.</td>
</tr>
<tr>
<td>Off</td>
<td>Power is not supplied by the external power supply, or a power fault has occurred. A power fault occurs when the input power falls outside of the specified voltage range of the external supply (6.0 V to 12.5 V).</td>
</tr>
</tbody>
</table>
I/O module type switch (S1)

Switch S1 is a four-position switch that sets the type of each module group for input or output (default). You cannot mix input and output modules within a group. You can use InstaCal to read the current I/O type configuration for each module group. Figure 7 shows switch S1 configured with its default settings.

![Figure 7. Switch S1 default configuration](image)

Control logic polarity switch (S2)

Switch S2 is a four-position switch that sets the control logic polarity for each module group for either inverted (active high) or non-inverted (active low, default). You can use InstaCal to read the current logic configuration for each module group. Figure 8 shows switch S2 configured with its default settings.

![Figure 8. Switch S2 default configuration](image)

Relay power-up state switch (S3)

Switch S3 is a four-position switch that sets the state of the output relays at power-up. You can use InstaCal to read the current resistor configuration for each module group. Figure 9 shows switch S3 configured with its default settings (modules inactive on power-up).

![Figure 9. Switch S3 default configuration](image)

Main connector and pin out

The table below lists the device connector specifications.

<table>
<thead>
<tr>
<th>Connector type</th>
<th>Screw terminal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wire gauge range</td>
<td>12-22 AWG</td>
</tr>
</tbody>
</table>

The USB-SSR08 has eight screw terminal pairs to connect external devices to the SSR modules. Two terminals are dedicated to each module (one positive and one negative terminal). Each screw terminal is identified with a label on the PCB and on the underside of the enclosure lid.
Caution! Before connecting wires to the screw terminals, turn off the power to the USB-SSR08, and make sure that the signal wires do not contain live voltages.

Use 12-22 AWG wire for your signal connections. Properly insulate the wires to avoid any short circuit to the other channels, ground, or other points on the device.

Caution! Keep the length of stripped wire at a minimum to avoid a short to the enclosure! When connecting your field wiring to the screw terminals, use the strip gage on the terminal strip, or strip to 5.5 to 7.0 mm (0.215” to 0.275”) long.

Module status LEDs

Independent red LEDs next to each module screw terminal pair indicate the on/off status of each module. The LED turns on when an output module is active or when an input module detects an input voltage (logic high).

Daisy chaining multiple USB-SSR08 devices

Daisy chained MCC USB Series devices connect to the USB bus through the high-speed hub on the USB-SSR08. You can daisy chain a maximum of four MCC USB Series devices to a single USB 2.0 port or USB 1.1 port on your computer. Use the supplied cable or an equivalent cable when daisy chaining MCC USB Series devices.

To daisy chain two or more USB-SSR08 devices, follow the steps below. This procedure assumes you already have one USB-SSR08 connected to a computer and to an external power source. The USB-SSR08 already connected to the computer is referred to as the connected device. The USB-SSR08 you want to daisy chain to the connected device is referred to as the new device.

1. Connect the Power OUT connector on the connected device to the Power IN connector on the new device.
   This step is required only if you plan to daisy chain power to another device.
2. Connect the USB OUT connector on the connected device to the USB IN connector on the new device.
3. To add another device, repeat steps 1-2, with the device you just connected now being the connected device.
A daisy chain example is shown in Figure 11. Note that the last device in the chain is supplied with external power.

![USB-SSR08 Daisy Chain Connections](image)

Figure 11. USB-SSR08 daisy chain connections

**Power limitations using multiple USB-SSR08 devices**

When daisy chaining additional MCC USB devices to the USB-SSR08, make sure you provide adequate power to each device that you connect. The USB-SSR08 is powered with a 9 VDC nominal, 1.0 A external power supply.

**Voltage drop**

A drop in voltage occurs with each device connected in a daisy-chain configuration. The voltage drop between the power supply input and the daisy chain output is 0.5 V maximum. Factor in this voltage drop when you configure a daisy chain system to ensure that at least 6.0 VDC is provided to the last device in the chain.

EU Declaration of Conformity
According to ISO/IEC 17050-1:2010

Manufacturer: Measurement Computing Corporation
Address: 10 Commerce Way
           Norton, MA 02766
           USA
Product Category: Electrical equipment for measurement, control and laboratory use.
Date and Place of Issue: October 19, 2016, Norton, Massachusetts USA
Test Report Number: EMI4221.05 and Addendum

Measurement Computing Corporation declares under sole responsibility that the product

**USB-SSR08, Board Revision F* or later**

is in conformity with the relevant Union Harmonization Legislation and complies with the essential requirements of the following applicable European Directives:

- Electromagnetic Compatibility (EMC) Directive 2014/30/EU
- Low Voltage Directive 2014/35/EU
- RoHS Directive 2011/65/EU

Conformity is assessed in accordance to the following standards:

**EMC:**

- **Emissions:**
  - EN 61326-1:2013 (IEC 61326-1:2012), Class A
- **Immunity:**
  - EN 61326-1:2013 (IEC 61326-1:2012), Controlled EM Environments
  - EN 61000-4-2:2008 (IEC 61000-4-2:2008)
  - EN 61000-4-3 :2010 (IEC61000-4-3:2010)
  - EN 61000-4-4 :2012 (IEC61000-4-4:2012)
  - EN 61000-4-5 :2005 (IEC61000-4-5:2005)
  - EN 61000-4-6 :2013 (IEC61000-4-6:2013)
  - EN 61000-4-11:2004 (IEC61000-4-11:2004)

- **Safety:**
  - EN 61010-1 (IEC 61010-1)

**Environmental Affairs:**

Articles manufactured on or after the Date of Issue of this Declaration of Conformity do not contain any of the restricted substances in concentrations/applications not permitted by the RoHS Directive.

*The board revision may be determined from the part number label on the board that states "193779X-01L", where X is the board revision.

Carl Haapaoja, Director of Quality Assurance
EU Declaration of Conformity, Legacy Hardware

Manufacturer: Measurement Computing Corporation
Address: 10 Commerce Way
          Norton, MA 02766
          USA

Category: Electrical equipment for measurement, control and laboratory use.
Measurement Computing Corporation declares under sole responsibility that the product

**USB-SSR08, Earlier than Revision F***

to which this declaration relates is in conformity with the relevant provisions of the following standards or other documents:

Emissions: Group 1, Class A
- EN 55011 (1990)/CISPR 11: Radiated and Conducted emissions.

Immunity: EN61326, Annex A
- IEC 1000-4-3 (1995): Radiated Electromagnetic Field immunity Criteria C.
- IEC 1000-4-8 (1994): Magnetic Field immunity Criteria A.

Declaration of Conformity based on tests conducted by Chomerics Test Services, Woburn, MA 01801, USA in June, 2005. Test records are outlined in Chomerics Test Report #EMI4221.05.

We hereby declare that the equipment specified conforms to the above Directives and Standards.

Carl Haapaoja, Director of Quality Assurance

*The board revision may be determined from the part number label on the board that states "193779X-01L", where X is the board revision.*
