Overview

USB-1608G Series devices are low-cost, high-speed, analog and digital I/O USB devices. All of these devices offer up to eight DIFF or 16 SE analog inputs, eight digital I/O channels, two counter inputs, and one timer output.

The USB-1608GX-2AO standard and OEM version offers two, 16-bit analog output channels with DAC rates up to 500 kS/s.

Analog Input

USB-1608G Series devices provide 16-bit analog inputs that are software-selectable as eight DIFF or 16 SE inputs. These devices also support input ranges of ± 10 V, ± 5 V, ± 2 V, and ± 1 V that are software-selectable per channel.

Analog Output (USB-1608GX-2AO only)

The USB-1608GX-2AO standard/OEM board has two 16-bit analog outputs that can be updated at a rate of 250 kS/s per channel; one output can be updated at a rate of 500 kS/s. The output range is fixed at ± 10 V.

Trigger Input

USB-1608G Series devices have an external digital trigger input. The trigger mode is software-selectable for edge- or level-sensitive mode. You can configure edge-sensitive mode for either rising or falling edge. In level-sensitive mode, you can configure for either high or low level. The default setting at power up is edge-sensitive, rising edge.

Retrigger Mode

Users can set up repetitive analog input trigger events. The trigger is automatically re-armed after it is activated. The A/D trigger count (the number of samples you want per trigger) is configurable with software.

Digital I/O

Eight bidirectional digital I/O lines are individually configurable for input or output. The DIO terminals can detect the state of any TTL-level input. Users can configure for pull-up (+5 V) or pull-down (0 V) with an onboard jumper.

Counter Input

Two 32-bit event counters are provided to count TTL pulses. The counters accept inputs of up to 20 MHz.

Timer Output

The PWM timer output generates a pulse output with a programmable frequency in the range of 0.0149 Hz to 32 MHz. The timer output parameters are software-selectable.

Calibration

The USB-1608G Series is factory-calibrated using a NIST-traceable calibration process. Specifications are guaranteed for one year.

The USB-1608G Series also supports field calibration for users to calibrate the device locally with the InstaCal utility.

USB-1608G Series OEM Versions

OEM versions have board-only form factors with header connectors for OEM and embedded applications (no case, CD, or USB cable included). All devices can be further customized to meet customer needs.

The OEM versions have the same specifications as the standard devices, but come in a board-only form factor with header connectors instead of screw terminals.
