USB-500/600 Series
General Information

Analog Input
One or two channels are available on USB-500/600 Series data loggers. Devices are available with temperature, thermocouple, humidity, voltage, current, or event inputs.

Sampling Interval
Loggers can be programmed with sampling intervals from 1 second to as long as 12 hours, depending on your data collection needs and the logger you are using. The logger stores the data and then uploads it to a computer through USB when collection is complete.

Logger Start Modes
Depending on the USB-500/600 Series logger being used, users can configure a device to start logging in one of the following ways:
- start immediately
- start when logger button pressed (loggers with LCDs only)
- start at selected date and time
- start based on temperature or humidity condition (USB-600 loggers only)

Alarms
All USB-500/600 Series data loggers except for the USB-505 provide high alarm and low alarm options that can be set through software. Users can also enable a hold on each alarm so that an alarm status continues even if the logged value is no longer in an alarm condition. The hold option allows users to be notified of an alarm condition without having to download data from the logger.

Alarms are indicated by LED blink patterns. USB-600 Series data loggers also have LCD and audible alarm indicators.

Status LEDs
Each USB-500/600 Series data logger includes one or two LEDs which indicate logging status and alarm conditions.
Some loggers also have LED indicators for battery and memory status.

Real-Time LCD Display
The following USB-500/600 Series data loggers feature a built-in LCD for real-time text display of data:
- USB-501-LCD
- USB-501-TC-LCD
- USB-502-LCD
- USB-601
- USB-602
- USB-603

The LCD on all of these loggers can display current and maximum/minimum stored temperature and humidity values.
The LCD on the USB-601, USB-602, and USB-603 also display the following information:
- graphical display of temperature/humidity
- logging start mode (if logging does not start immediately)
- alarm indicators
- animated icon indicating device is logging
- locked mode indicator when start/stop logging button is disabled

The USB-601, USB-602, and USB-603 are the newest additions to the USB-500/600 Series of data loggers. USB-600 Series loggers offer device controls to start and stop logging, LCD and audible alarm indicators, the ability to store multiple logging sessions between downloads, and graphical data displays.

Multiple Logging Sessions (USB-600 Series Only)
Users can start and stop logging on the USB-600 Series data loggers either through software or using the buttons on the logger. This feature allows for storing of multiple logging sessions in between downloads.
USB-500/600 Series Data Logger Software

Each USB-500/600 Series data logger includes an easy-to-use software application which allows users to configure the following settings:

- sampling interval
- high/low alarm options
- temperature scale
- logger start mode
- buffer management
- LED and LCD power saving options

Settings vary depending on the data logger you are using.

Use the included software to download, display, and save data to a file. The loggers also record maximum and minimum values. Logged temperature, humidity, dew point, voltage, and current data can also be exported to comma-separated values (CSV) and text formats for display and analysis in popular spreadsheet programs such as Microsoft Excel.

The included USB-500/600 Data Logger software displays recorded measurements in an easy-to-read chart. Movable markers isolate data values along with a time stamp. Temperature, humidity, dew point, voltage, or current measurements are displayed. In addition, high and low alarms are also shown.

USB-525 Logger Assistant

The ultra-portable USB-525 Logger Assistant allows the user to conveniently program compatible USB-500 model loggers and view the data on a high-resolution screen.

The USB-525 is compatible with the following temperature/humidity data loggers:

- USB-501-LT
- USB-501-TC
- USB-501-LCD
- USB-501-PRO
- USB-501-RCG
- USB-501-TC-LCD
- USB-502
- USB-502-LCD
- USB-502-PLUS

Connect a data logger directly to the USB port on the USB-525, and follow the instructions on the touch-screen display to set up a compatible logger, download data, view data, and export data for use in a spreadsheet application. Logger setup and data display can be done on site without the need of a computer, reducing interruptions in data collection and decreasing travel by users between sites.

Logged data can also be transferred to a computer over the included micro-USB cable for display using the USB-500/600 Data Logger software.

USB-500/600 Series
Specifications

Typical and maximum accuracy of relative humidity measurements for USB-602 given in %RH for temperatures 0 °C to 80 °C.

Long-term exposure of the USB-602 to humidity levels outside of the “normal” range may temporarily offset RH measurements (±3 %RH after 60 hours). Once returned to less extreme conditions, the device slowly returns toward calibration state.

**Data Sampling**
