1. Introduction

CB-7000 is a family of network data acquisition and control modules. They provide analog-to-digital, digital-to-analog, digital input/output, timer/counters and other functions. These modules can be remotely controlled by a set of commands. The DIO modules support TTL signals, photo-isolated digital inputs, relay contact outputs, solid-state relay outputs, PhotoMOS outputs, and open-collector outputs. Refer to *Sec. 1.3* for detailed information.

1.6 Quick Start

Refer to "**CBCOM Series Network Setup and Quick Start Manual**" and "**Getting Started**" for details.

1.7 Default Setting

Default setting for CB-7000 DIO modules:

- Address: 01
- Baud rate: 9600 bps
- Type: Type 40 for DIO mode
- Checksum Disable
- CB-7043/43D jumper setting at INIT*
- CB-7053/53D jumper setting at INIT*

1.8 Jumper Setting

CB-7043/43D: Jumper J3 for select the pin INIT*/DO15

Select DO15 

Select INIT* 

(default)

CB-7053/53D: Jumper J1 for select the pin INIT*/DI15

Select DI15 

Select INIT* 

(default)

1.9 Configuration Tables

Configuration Table of CB-7000 DIO modules

Baud rate Setting (CC)

Code	03	04	05	06	07	08	09	0A
Baudrate	1200	2400	4800	9600	19200	38400	57600	115200

Type Setting (TT)

Type = **40** for DIO mode

Data Format Setting (FF)

7	6	5	4	3	2	1	0
*1	*2	0	0	0	*3		

*1: Counter Update Direction: 0=Falling Edge, 1=Rising Edge

*2: Checksum Bit: 0=Disable, 1=Enable

*3: 7050 = 0 (Bit[2.1.0] = 000), 7060 = 1 (Bit[2.1.0] = 001)

2. Commands

Command Format: **(Leading)(Address)(Command)[CHK](cr)**

Response Format: **(Leading)(Address)(Data)[CHK](cr)**

[CHK] 2-character checksum

(cr) end-of-Command character, character return(0x0D)

Calculate Checksum:

1. Calculate ASCII sum of all characters of command (or response) string except the carriage return (cr).

2. Mask the sum of string with 0ffh.

Example:

Command string: $012(cr)

Sum of string = '$'+'0'+'1'+'2' = 24h+30h+31h+32h = B7h

The checksum is B7h, and [CHK] = "B7"

Command string with checksum: $012B7(cr)

Response string: !01400600(cr)

Sum of string: '!'+'0'+'1'+'4'+'0'+'0'+'6'+'0'+'0'

= 21h+30h+31h+34h+30h+30h+36h+30h+30h = 1ACh

The checksum is ACh, and [CHK] = "AC"

Response string with checksum: !01400600AC(cr)

2.1 %AANNTTCCFF

Description: Set module Configuration

Syntax: %AANNTTCCFF[CHK](cr)

%	Delimiter character
AA	Address of setting module (00 to FF)
NN	New Address for setting module (00 to FF)
TT	Type 40 for DIO module
CC	New baud rate for setting module (Ref. *Sec. 1.9*). Short INIT* to ground when changing baud rate. (Ref *Sec. 3.1*)
FF	New data format for setting module (Ref. *Sec. 1.9*). Short the INIT* to ground to change checksum setting. (Ref. *Sec. 3.1*)

Response: Valid Command: **!AA[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)

Example:

Command: %0102400600 Receive: !02

Set module Address 01 to 02; return successful.

Related Command:

Sec. 2.5 $AA2

Related Topics:

Sec. 1.9 Configuration Tables, *Sec. 3.1* INIT* pin Operation

2.2 #**

Description: Synchronized Sampling

Syntax: #[CHK](cr)**

Delimiter character

** Synchronized sampling Command

Response: No response

Example:

Command: #** No response

Send synchronized sampling Command to all modules.

Command: $014 Receive: !10F0000

Read synchronized data from Address 01, return S=1, first read and data.

Command: $014 Receive: !00F0000

Read synchronized data from Address 02, return S=0, have read data.

Related Command:

Sec. 2.6 $AA4

2.3 #AABBDD

Description: Digital Output

Command: #AABBDD[CHK](cr)

Delimiter character

AA Address of reading module(00 to FF)

BBDD Output command and parameter

For multichannel outputs, set BB = 00, 0A, or 0B. It selects the output group. DD is the output value.

Parameter for Multi-Channel Output					
	Output Channels	DD for command #AABBDD			
		BB=00/0A		BB=0B	
I-7042/42D	13	00 to FF	DO(0-7)	00 to 1F	DO(8-12)
I-7043/43D	16	00 to FF	DO(0-7)	00 to FF	DO(8-15)
I-7044/44D	8	00 to FF	DO(1-8)	NA	NA
I-7050/50D	8	00 to FF	DO(0-7)	NA	NA
I-7060/60D	4	00 to 0F	RL(1-4)	NA	NA
I-7063s *1	3	00 to 07	RL(1-3)	NA	NA
I-7065s *2	5	00 to 1F	RL(1-5)	NA	NA
I-7066/66D	7	00 to 7F	RL(1-7)	NA	NA
I-7067/67D	7	00 to 7F	RL(1-7)	NA	NA
*1 I-7063s include : I-7063/63D/63A/63AD/63B/63BD *2 I-7065s include : I-7065/65D/65A/65AD/65B/65BD					

To output a single-channel, set BB = 1c, Ac, or Bc where c is the selected channel. Set DD to 00 to clear output and 01 to set the output.

Parameter for Single-Channel Output				
	Single channel output command #AABBDD			
	c for BB=1c/Ac		c for BB=Bc	
I-7042/42D	0 to 7	DO(0-7)	0 to 4	DO(8-12)
I-7043/43D	0 to 7	DO(0-7)	0 to 7	DO(8-15)
I-7044/44D	0 to 7	DO(1-8)	NA	NA
I-7050/50D	0 to 7	DO(0-7)	NA	NA
I-7060/60D	0 to 3	RL(1-4)	NA	NA
I-7063s *1	0 to 2	RL(1-3)	NA	NA
I-7065s *2	0 to 4	RL(1-5)	NA	NA
I-7066/66D	0 to 6	RL(1-7)	NA	NA
I-7067/67D	0 to 6	RL(1-7)	NA	NA
*1 I-7063s include : I-7063/63D/63A/63AD/63B/63BD *2 I-7065s include : I-7065/65D/65A/65AD/65B/65BD				

Response: Valid Command: **>[CHK](cr)**

Invalid Command: **?[CHK](cr)**

Ignored Command: **![CHK](cr)**

Syntax or communication error may get no response.

> Delimiter for valid Command

? Delimiter for invalid Command

! Delimiter for ignoring the Command. The module's host watchdog timeout status is set, and the output is set to Safe Value.

Example:

Command: #0100FF Receive: >

Assume module is CB-7044, set Address 01 output value FF; return is successful.

Command: #021001 Receive: >

Assume module is CB-7067, set Address 02 channel 0 on, return is successful.

Command: #021701 Receive: ?

Set Address 02 channel 7 on, return the channel is invalid for CB-7067; it only has seven outputs (0 to 6).

Command: #0300FF Receive: !

Set Address 03 output value FF, return ignore. The module's host watchdog timeout status is set, and the output is set to Safe Value.

Note:

The Command is not for CB-7041/41D/52/52D/53/53D.

2.4 #AAN

Description: Read Digital Input Counter from channel N

Command: #AAN[CHK](cr)

#	Delimiter character
AA	Address of reading module (00 to FF)
N	channel to read

Response: Valid Command: **!AA(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
(Data)	Digital input counter value in decimal, from 00000 to 65535

Example:

Command: #032 Receive: !0300103

Read Address 03 digital input counter value of channel 2, return value 103.

Command: #025 Receive: ?02

Read Address 02 digital input counter value of channel 5, return the channel is not available.

Related Command:

Sec. 2.12 $AACN

Note:

The Command is not for CB-7042/42D/43/43D/66/66D/67/67D.

2.5 $AA2

Description: Read Configuration

Command: $AA2[CHK](cr)

$ Delimiter character

AA Address of reading module (00 to FF)

2 Command for read configuration

Response: Valid Command:

!AATTCCFF[CHK](cr)

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

! Delimiter for valid Command

? Delimiter for invalid Command

AA Address of response module(00 to FF)

TT Type code of module; it must be 40

CC Baud rate code of module (Ref. *Sec. 1.9*)

FF Data format of module (Ref. *Sec. 1.9*)

Example:

Command: $012 Receive: !01400600

Read Address 01 status, return DIO mode, baud 9600, no checksum.

Related Command:

Sec. 2.1, %AANNTTCCFF

Related Topics:

Sec. 1.9, Configuration Tables; *Sec. 3.1,* INIT* pin Operation

2.6 $AA4

Description: Read Synchronized Data

Command: $AA4[CHK](cr)

$	Delimiter character
AA	Address of reading module (00 to FF)
4	Command for read synchronized data

Response: Valid Command: **!S(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
S	Status of synchronized data, 1 = first read, 0 = been read
(Data)	synchronized DIO value (Ref. *Sec. 1.9*)

Example:

Command: $014 Receive: ?01

Read Address 01 synchronized data, return no data available.

Command: #** Receive: no response

Send synchronized sampling to all modules.

Command: $014 Receive: !1000F00

Read Address 01 synchronized data, return S=1, first read, and synchronized data 0F00

Related Command:

*Sec. 2.2, #***

Related Topics:

2.7 $AA5

Description: Read Reset Status

Command: $AA5[CHK](cr)

$	Delimiter character
AA	Address of reading module (00 to FF)
5	Command for read reset status

Response: Valid Command: **!AAS[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
S	Reset status, 1 = the module has been reset, 0 = the module has not been reset.

Example:

Command: $015 Receive: !011

Read Address 01 reset status, return first read.

Command: $015 Receive: !010

Read Address 01 reset status, return no reset occurred.

Related Topics:

Sec3.4, Reset Status

2.8 $AA6

Description: Read Digital I/O Status

Command: $AA6[CHK](cr)

$	Delimiter character
AA	Address of reading module (00 to FF)
6	Command for read digital input/output status

Response: Valid Command: **!(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
(Data)	Digital input/output value (Ref. *Sec. 1.9*)

Example:

Command: $016 Receive: !0F0000

Assume module is CB-7060. Read Address 01 DIO status, return 0F00; digital input IN1 to IN4 are open, digital output RL1 to RL4 are off.

Related Command:

2.9 $AAF

Description: Read Firmware Version

Command: $AAF[CHK](cr)

$	Delimiter character
AA	Address of reading module (00 to FF)
F	Command for read firmware version

Response: Valid Command: **!AA(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
(Data)	Firmware version of module

Example:

Command: $01F Receive: !01A2.0

Read Address 01 firmware version, return version A2.0.

Command: $02F Receive: !01B1.1

Read Address 01 firmware version, return version B1.1.

2.10 $AAM

Description: Read Module Name

Command: $AAM[CHK](cr)

$	Delimiter character
AA	Address of reading module (00 to FF)
M	Command for read module name

Response: Valid Command: **!AA(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
(Data)	Name of module

Example:

Command: $01M Receive: !017042

Read Address 01 module name, return name 7042.

Command: $03M Receive: !037060D

Read Address 03 module name, return name 7060D.

Related Command:

2.21 ~AA3EVV

Description: Set Host Watchdog Timeout Value

Command: ~AA3EVV[CHK](cr)

~	Delimiter character
AA	Address of setting module (00 to FF)
3	Command for set host watchdog timeout value
E	1 = Enable, 0 = Disable host watchdog
VV	Timeout value, from 01 to FF, each for 0.1 second

Response: Valid Command: **!AA[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module (00 to FF)

Example:

Command: ~010 Receive: !0100

Read Address 01 module status, return host watchdog timeout status is clear.

Command: ~013164 Receive: !01

Set Address 01 host watchdog timeout value 10.0 seconds and enable host watchdog, return successful.

Command: ~012 Receive: !01164

Read Address 01 host watchdog timeout value; return that host watchdog is enabled, and time interval is 10.0 seconds.

Command: ~** No response

Reset the host watchdog timer.

Wait for about 10 seconds and don't send command ~**, the LED of module will flash. The flashing LED indicates the host watchdog timeout status is set.

Command: ~010 Receive: !0104

Read Address 01 modul status, return host watchdog timeout status is set.

Command: ~012 Receive: !01064

Read Address 01 host watchdog timeout value, return that host watchdog is disabled, and time interval is 10.0 seconds.

Command: ~011 Receive: !01

Reset Address 01 host watchdog timeout status, return successful. And the LED of this module stop flash.

Command: ~010 Receive: !0100

Read Address 01 module status, return host watchdog timeout status is clear.

Related Command:

Sec. 2.17, ~**; *Sec. 2.18,* ~AA0; *Sec. 2.19,* ~AA1; *Sec. 2.20,* AA2; *Sec. 2.22,* ~AA4V; *Sec. 2.23,* ~AA5V

2.22 ~AA4V

Description: Read PowerOn/Safe Value.

Command: ~AA4V[CHK](cr)

~	Delimiter character
AA	Address of reading module (00 to FF)
4	Command for read PowerOn/Safe Value
V	P = read PowerOn value, S = read Safe Value

Response: Valid Command: **!AA(Data)[CHK](cr)**

Invalid Command: **?AA[CHK](cr)**

Syntax or communication error may get no response.

!	Delimiter for valid Command
?	Delimiter for invalid Command
AA	Address of response module(00 to FF)
(Data)	PowerOn Value or Safe Value

For CB-7042/42D/43/43D (Data) is VVVV, where VVVV is the PowerOn Value (or Safe Value).

For other modules, (Data) is VV00, where VV is the PowerOn Value(or Safe Value).

Example:

Command: @010000 Receive: >

Output Address 01 value 0000, return successful.

Command: ~015S Receive: !01

Set Address 01 Safe Value, return successful.

Command: @01FFFF Receive: >

Output Address 01 value FFFF, return successful.

Command: ~015P Receive: !01

Set Address 01 PowerOn Value, return successful.

Command: ~014S Receive: !010000

Read Address 01 Safe Value, return 0000.

Command: ~014P Receive: !01FFFF

Read Address 01 PowerOn Value, return FFFF.

Related Command:

Note:

The Command is not for CB-7041/41D/52/52D/53/53D.

3. Application Notes

3.1 INIT* pin Operation

Each CB-7000 module has a build-in EEPROM to store configuration information such as address, type, baud rate and other information. Sometimes, a user may forget the configuration of the module. Therefore, the CB-7000 have a special mode named "**INIT mode**", to help user to resolve the problem. The "**INIT mode**" is setting as **Address=00, baud rate=9600bps, no checksum**

To enable INIT mode, please follow these steps:

Step 1. Power-down the module.

Step 2. Connect the INIT* pin to the GND pin.

Step 3. Power-up the module.

Step 4. Send Command $002(cr) in 9600 bps to read the configuration stored in the module's EEPROM.
Refer to "**7000 Bus Converter User Manual**" *Sec. 5.1* and "**Getting Started**" for more information.

3.2 Module Status

PowerOn Reset or **Module Watchdog Reset** will set all outputs to the **PowerOn Value**. The module can accept the host's Command to change the output value.

Host Watchdog Timeout will set all output to the **Safe Value**.The module's status (read by Command ~AA0) will be 04, and the output Command will be ignored.

3.3 Dual Watchdog Operation

Dual Watchdog = Module Watchdog + Host Watchdog

The Module Watchdog is a hardware reset circuit that monitors the module's operating status. When working in harsh or noisy environment, the module may go down by a noise signal. The Module Watchdog times out and sets output to PowerOn value.

The Host Watchdog is a software function to monitor the host's operating status. Its purpose is to detect a network communication problem or a halted host. When the timeout interval expired, the module will put all outputs to the predefined Safe Value. This places the controlled element in a known-safe condition.

The CB-7000 module with Dual Watchdog makes the control system more reliable and stable.

3.4 Reset Status

The Reset Status is set while the module power on or reset by Module Watchdog, and is cleared when the Command read Reset Status ($AA5) is applied. This is useful for user to check the module's working status. When the Reset Status is set means the module is reset and the output may be changed to the PowerOn Value. When the Reset Status is clear means the module is not reset, and the output cannot be changed.

3.5 Digital Output

A module's output can have one of three values:

1. **Safe Value**. If the host watchdog timeout status is set, the output is set to Safe Value.If the module receives an output

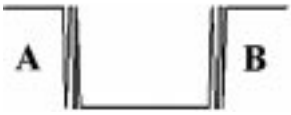
Command, such as @AA(Data) or #AABBDD, the module ignores the command and returns '!', and will not change the output to the output command value. **The host watchdog timeout status is set and stored in EEPROM when the host watchdog timeout interval expired, and only can be cleared by Command ~AA1.** If user wants to change the output, he first needs to clear the host watchdog timeout status, then send an output command to change the output to a desired value.

2. **PowerOn Value**. When the Module Watchdog Timer is set, and the host watchdog timeout status is clear, the module's output is set to the predefined PowerOn Value.

3. **Output Command value**. If the host watchdog timeout status is clear, the user issues a digital output command such as @AA(Data) or #AABBDD to the module for changing the output value. The module will respond successful (receive >).

3.6 Latched Digital Inputs

If, for example, the user connects a PB switch to a a digital I/O module input channel and wants to read the switch stoke. The input is a pulse digial input, and user will lose the data. When read



by Command $AA6 in A or B position, the response is that no input occurred and he will lose the pulse information. However, the read latch-low digital input Command $AAL0 will solve this problem. When $AAL0 Command in A and B position is issued, the response indicates that there was a low pulse between A and B position for a switch closure.

4 DN Module

4.1 DN-SSR4

Output Channel: Four Solid State Relay Contacts

Output Specification:

Type: Zero-Cross AC Solid-State Relay Output

Rated Load Voltage: 200 to 240 VAC

Rated Load Current: 4 Amps

Surge Current: 50 A,

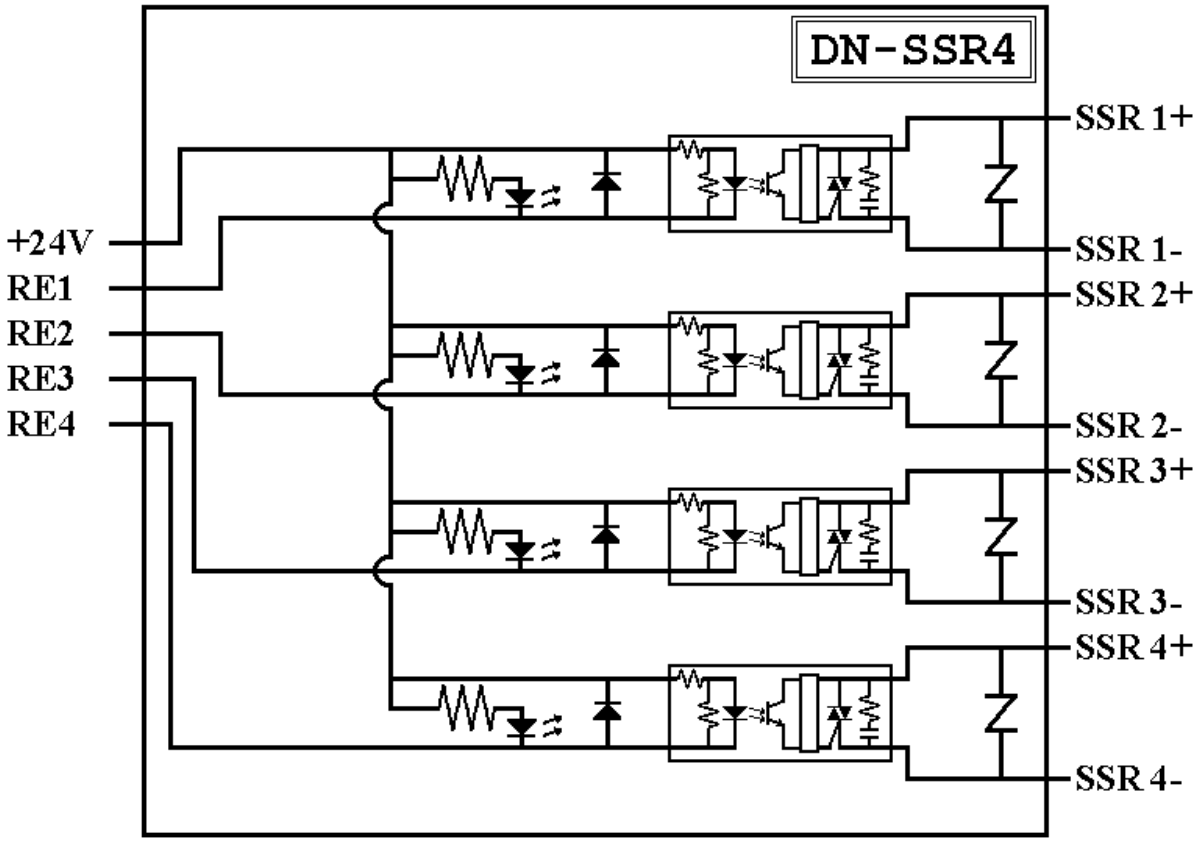
Max. Off-State Leakage Current: 5.0 mA

Operate Time: 1/2 cycle of voltage sine wave + 1ms

Input Impedance: 1.5K Ohms

DIN-Rail mounted

Power Input: +24VDC



4.2 DN-PR4

Output Channel: Four Mechanical Relay Contacts

Output Specification:

Type: 1 form-C Relay Contact

Nominal Load: 5A@250VAC, 5A@30VDC

Max. Switching Power: 1250VAC

Max. Switching Voltage: 250VAC, 150VDC

Max. Switching Current: 5 A.

Mechanical/Electrical Life: Min. $10x10^6/10x10^4$ operations.

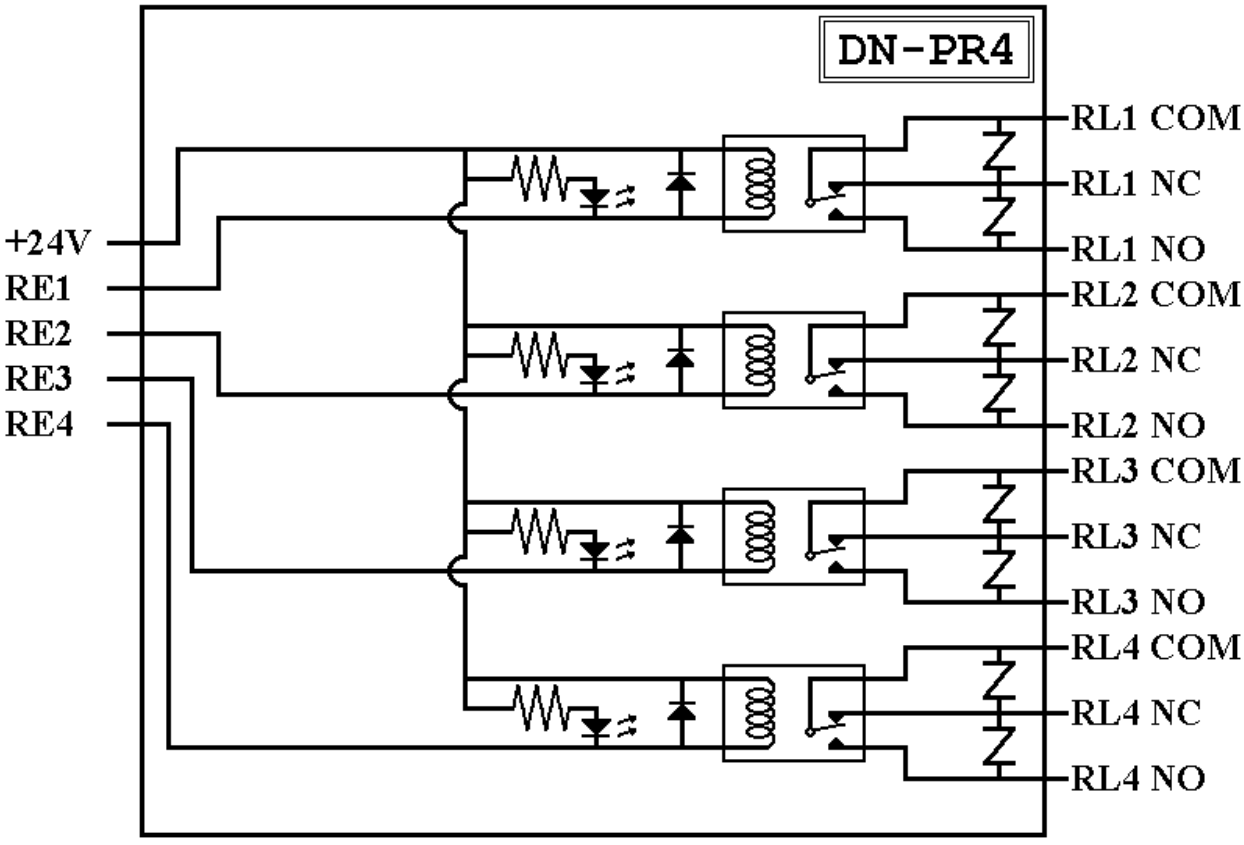
Operate/Release Time: Max. 10 ms/5 ms

Dielectric Strength: 2000VAC 1 minute

Nominal Coil Power: 360 mW

DIN-Rail mounted

Power Input: 24VDC



4.3 RM-104, RM-108, RM-116

Output Channel: 4/8/16 Relay Contacts

Output Specification:

Type: 1 Form-C Relay Contact

Rated Load: 16 A.@250VAC

Max. Switching Voltage: 400VAC

Max. Peak Current: 30 A.

Standard Contact Material: AgCd0

Min. Life: 100,000 operations.

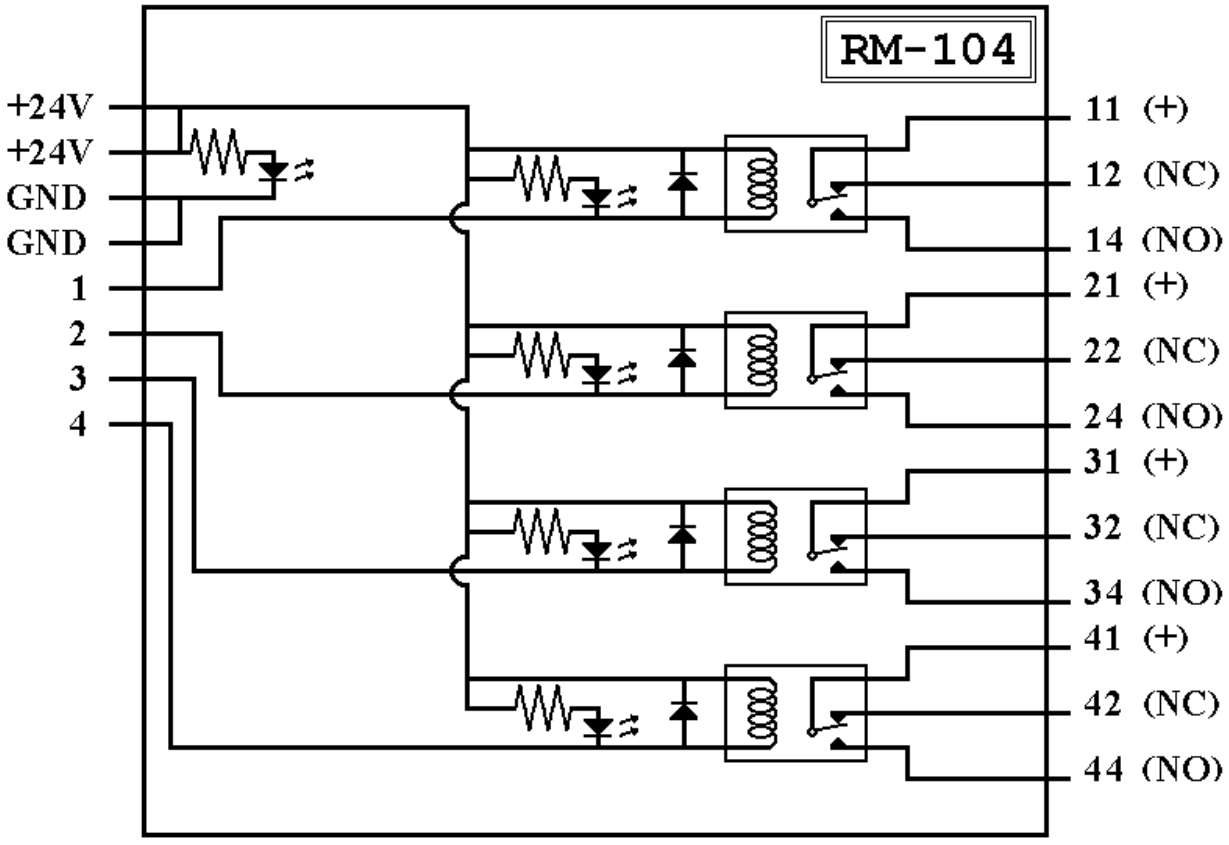
Din-Rail mounted

Dimension:

RM-104: 78 x 77mm RM-108: 135 x 77mm

RM-116: 270 x 77mm

Power Input: 24VDC



4.4 RM-204, RM-208, RM-216

Output Channel: 4/8/16 Relay Contacts

Relay Specification:

Type: 2 Form-C

Rated Load: 5 A.@250VAC

Max. Switching Voltage: 400VAC

Max. Peak Current: 10 A.

Standard Contact Material: Ag Nt

Min. Life: 100,000 operations.

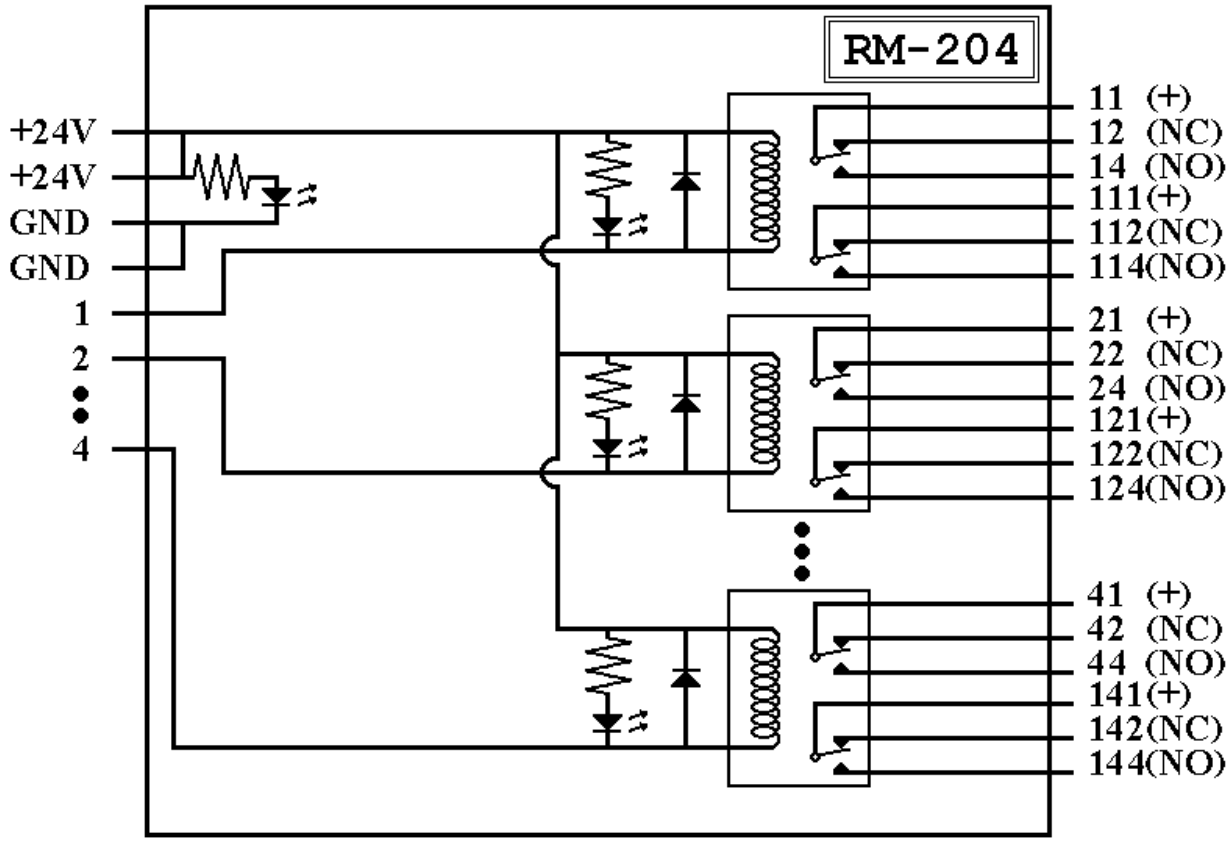
Din-Rail mounted

Dimension:

RM-204: 78 x 77mm RM-208: 135 x 77mm

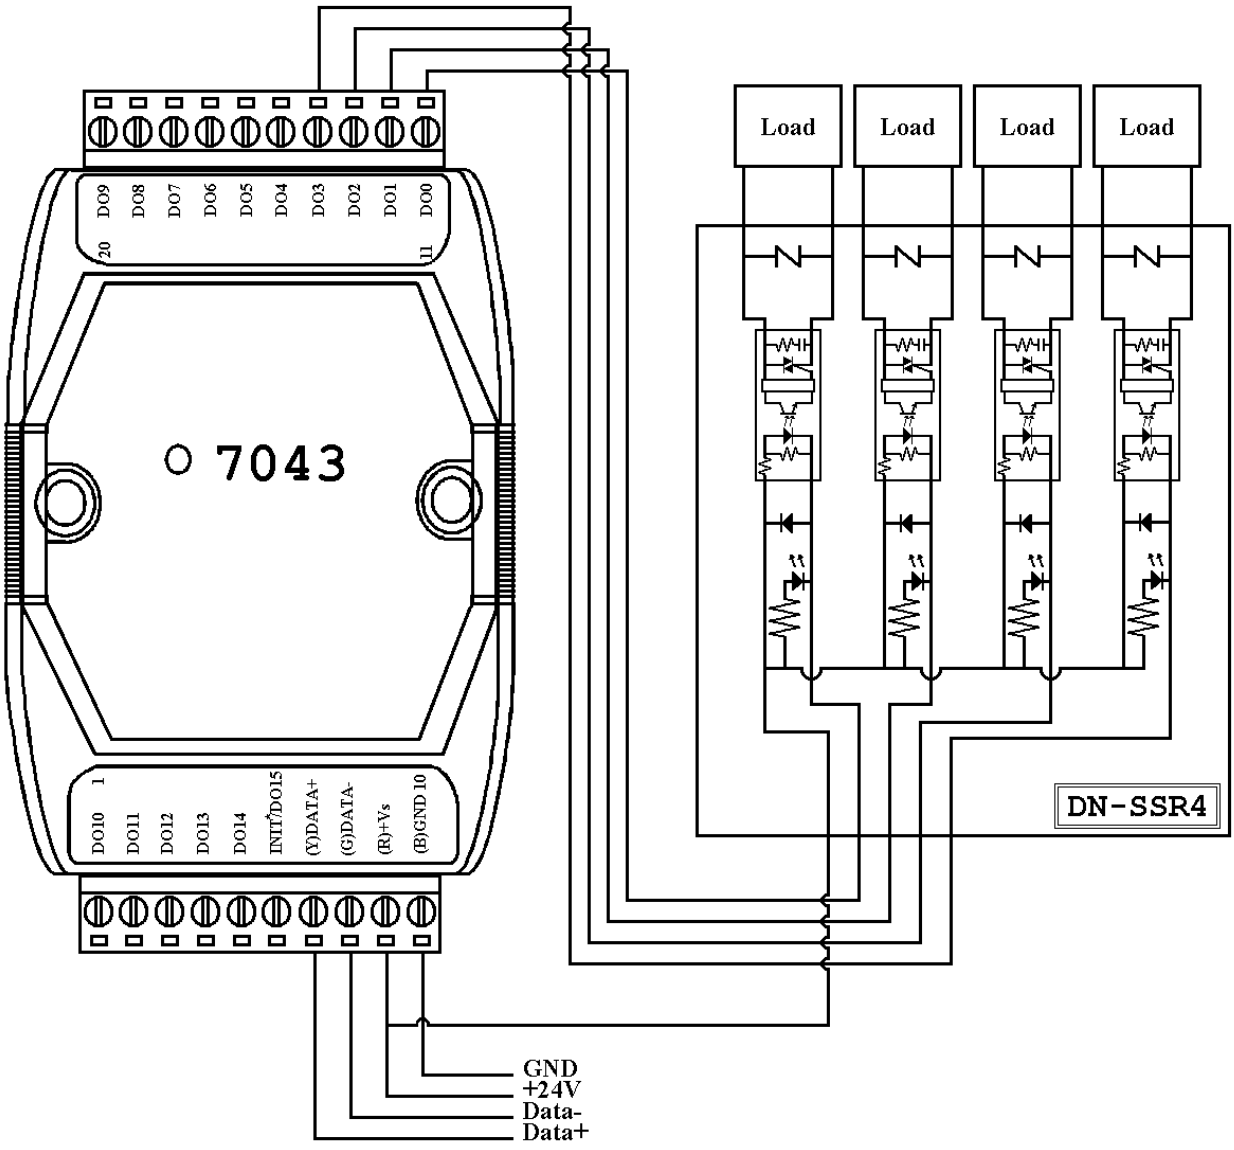
RM-216: 270 x 77mm

Power Input: 24VDC



4.5 Application

The DN Modules are the IO extension of CB-7000 modules. These modules can drive more power and heavy loads . User may use CB-7000 modules, like CB-7043 or others, to control the DN modules to drive loads.



For your notes.

Trademark and Copyright Information

Notice

Measurement Computing Corporation does not authorize any Measurement Computing Corporation product for use in life support systems and/or devices without prior written consent from Measurement Computing Corporation. Life support devices/systems are devices or systems that, a) are intended for surgical implantation into the body, or b) support or sustain life and whose failure to perform can be reasonably expected to result in injury. Measurement Computing Corporation products are not designed with the components required, and are not subject to the testing required to ensure a level of reliability suitable for the treatment and diagnosis of people.

EC Declaration of Conformity

We, Measurement Computing Corp., declare under sole responsibility that the product:

Part Number	Description
CB-7041/42/43/44/50/52/53/60/63/65/66/67	Digital I/O Modules

to which this declaration relates, meets the essential requirements, is in conformity with, and CE marking has been applied according to the relevant EC Directives listed below using the relevant section of the following EC standards and other normative documents:

EU EMC Directive 89/336/EEC: Essential requirements relating to electromagnetic compatibility.

EU 55022 Class B: Limits and methods of measurements of radio interference characteristics of information technology equipment.

EN 50082-1: EC generic immunity requirements.

IEC 801-2: Electrostatic discharge requirements for industrial process measurement and control equipment.

IEC 801-3: Radiated electromagnetic field requirements for industrial process measurements and control equipment.

IEC 801-4: Electrically fast transients for industrial process measurement and control equipment.
