USB-5100 Series Multi-Channel Data Loggers

USB-5100 Series data loggers offer low-cost, stand-alone collection from multiple data channels. The USB-5106 (shown above) logs temperature, current, and/or voltage from each of its four analog channels.

Features
- Stand-alone, high accuracy, remote multichannel data loggers
  - USB-5104 logs data from up to four thermocouple channels
  - USB-5106 logs data from up to four analog channels
- High-accuracy, four-channel
  Built-in LCD screen displays readings and other device information
- Software-selectable logger alarm indicates high or low readings
- Logger control buttons for manual control of logging, display options, and event generation
- Powered by two AAA batteries (included)
- Includes accessory kit for logger mounting
- Compatible sensors sold separately

Software
- Easy-to-use USB-5100 Series software available as a free download
- Configure loggers and read out, display, analyze, and export logger data.

Supported Operating Systems
- PC: Windows® 10/8/8.1/7 (32- and 64-bit)
- Mac®: OS X version 10.9.x and later (32- and 64-bit)
- Java™ Runtime Environment (JRE) 7 or later required on both Windows and Mac platforms

Overview
The USB-5100 Series consists of two high-accuracy, easy-to-deploy data loggers designed for indoor applications.

- The USB-5104 is a four-channel thermocouple (TC) data logger that is ideal for various temperature measurement and recording applications. The logger supports any combination of standard-type TC sensors (sold separately) on its four, 20-bit channels. It also includes an internal 12-bit, 10K thermistor to record ambient temperature for further applications.
- The USB-5106 is a 16-bit four-channel analog logger for developing performance monitoring systems that involve voltage, temperature, and/or current measurements.

USB-5100 Series software provides a user-friendly interface for configuring loggers and reading out, displaying, analyzing, and exporting logged data.

USB-5100 Series
General Information

Sensor Input
All USB-5100 Series loggers support software-selectable burst logging, enabling the logger to record data at a different intervals based on user-specified conditions.

Users can easily configure logger logging intervals (one second to over 18 hours), high/low alarms for each type of data being logged using the USB-5100 Series Data Logger software.

The built-in LCD screen displays the sensor reading, logging status, battery use, and memory consumption in between readouts.

USB-5104
The USB-5104 provides four high-accuracy TC input channels that support J, K, T, E, R, S, B, or N type TC sensors. Each channel can be individually-configured based on the connected TC type.

The USB-5104 also includes an internal 10K thermistor to record ambient temperature and to provide cold-junction compensation of the TC output.

The USB-5104 can store up to 1.6 million measurements.

Refer to Sensors on page 8 for a list of supported thermocouple sensors that can be purchased separately.

USB-5106
The USB-5106 provides four high-accuracy analog input channels (using 2.5 mm connector) that support input from temperature, 4-20 mA, and voltage sensors.

The USB-5106 can store up to 1.9 million measurements.

Refer to Sensors on page 8 for a list of supported temperature, current, and voltage sensors that can be purchased separately.

Device Buttons
USB-5100 Series devices provide two software-configurable buttons on the device for users to manually control logging and data display.

Start/Stop button: Depending on the software configuration, users can:
- press this button for three seconds to start/resume logging, or to stop logging.
- press this button for one second to record an internal event or to turn on the LCD screen.

Alarm/Stats button: Depending on the software configuration, users can:
- press this button to clear a tripped alarm
- press this button to switch between statistics, alarm readings, and the current sensor reading (and the internal temperature reading, if supported).

LCD Screen
USB-5100 Series data loggers include a LCD screen that displays the following information:

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>START</td>
<td>The device is waiting to be launched by pressing the Start/Stop button.</td>
</tr>
<tr>
<td>STOP</td>
<td>The device is currently logging; stop logging by the pressing Start/Stop button.</td>
</tr>
<tr>
<td>LOGGING</td>
<td>The device is currently logging.</td>
</tr>
<tr>
<td>📈</td>
<td>A sensor reading is above or below the high or low alarm that you configured.</td>
</tr>
<tr>
<td>CLEAR</td>
<td>An alarm waiting to be cleared by pressing the Alarm/Stats button for three seconds.</td>
</tr>
<tr>
<td>🔋</td>
<td>Battery indicator displays the approximate battery power remaining.</td>
</tr>
<tr>
<td>℉</td>
<td>Temperature reading – the displayed temperature units are configured in software.</td>
</tr>
<tr>
<td>CH1</td>
<td>The channel number associated with the TC reading (channel 1 in this example). Up to four channels are displayed at one time.</td>
</tr>

<tr>
<td>Stop</td>
<td>The logger has been stopped by software or because the memory is full.</td>
</tr>
<tr>
<td>AMP</td>
<td>Voltage and Current Sensor Channels Only: Example of the units entered for a current sensor, which appears to the right of the channel number. Enter the unit type in the LCD Units field for that sensor in the USB-5100 Series software. Units for temperature sensors are displayed as °F or °C only.</td>
</tr>
</tbody>
</table>

Logging Modes and Filters
The following logging modes can be configured using the USB-5100 Series software:

- **Normal**: Configures the logger to collect data at the selected logging interval.
- **Burst Logging**: Configures the logger to use a different logging interval when specific conditions are met. Burst logging is not available for the internal temperature channel.
- **Statistics**: Configures the logger to calculate maximum, minimum, average, and standard deviation values during logging for all enabled sensors except battery voltage. Statistics logging is not available for the internal temperature channel.

Statistics are calculated for each logging session, and can be displayed on the LCD screen.

You can also create custom statistics, called a **filtered series**, by selecting a configured channel, selecting a filter (maximum, minimum, or average), and selecting how often to calculate the filter for the channel. A filtered series is calculated when you read out and plot the logger data, and are not displayed on the LCD screen.

Linear Scaling Assistant (USB-5106 Only)
The USB-5106 also supports the Linear Scaling Assistant, which converts a data series from a compatible sensor to some other measurement when you enter two raw values and their corresponding measurement values. The conversion must be based on a linear relationship.

USB-5100 Series Software

**Logging Interval**
The USB-5100 Series software provides both preset and custom logging intervals that range from 1 second to over 18 hours (18 hours, 12 minutes, and 15 seconds maximum) depending on your data collection needs. The logger stores the data and users can upload it to a computer through USB when collection is complete.

The LCD screen on USB-5100 Series data loggers displays information on readings, alarms, statistics, memory, and battery power.

The USB-5100 Series software provides options for configuring alarms, filters, and scaling of logger data, and logging intervals, modes, and start/stop conditions.
USB-5100 Series
Software Information

Start Logging Modes
The following start logging modes can be configured using the USB-5100 Series software:

• **Now:** Logging begins by clicking **Start** in the **Launch Logger** software window.
• **At Interval:** Logging begins at an exact interval (for example, 9:00:00 rather than 8:47:00 when you choose a one-hour logging interval). The exact start time depends on the selected logging interval you choose.
• **On Date/Time:** Logging begins at a selected date and time, up to approximately six months from the present. The LCD screen counts down to the start date/time and then logging begins.
• **Push Button:** Logging starts when the Start/Stop button on the logger pressed for three seconds. The LCD screen on the logger displays **START** until the button is pressed.

Stop Logging Modes
The following stop logging modes can be configured using the USB-5100 Series software:

• **When memory fills:** The logger stops recording data once the memory is full.
• **Never (wrapping):** The logger records data continuously until either the logger battery runs out or the Start/Stop button on the logger pressed for three seconds. When the logger memory is full, the newest data overwrites the oldest data.
• **Push button:** The logger stops recording data when the Start/Stop button on the logger is pressed for three seconds. The LCD screen on the logger displays **STOP** when this option has been selected.
• **Resume logging on next button push:** Resume a stopped logger by pressing the Start/Stop button for one second. This option is only available when **Push button** is selected as a **Stop Logging** option.
• **Specific stop date:** Select the date that the logger stops recording data. Choose either a preset time or set your own custom date and time.

Alarms
USB-5100 Series loggers provide high alarm and low alarm options that can be set through software. Alarm conditions and readings are indicated on the LCD screen (refer to **LCD Screen** on page 2).

Alarms can be set based on the number of readings outside the alarm range – for example, trip an alarm when five readings are above/below the configured alarm value. Alarms conditions can be **cumulative** – five readings out-of-sequence trip an alarm – or **consecutive** – five readings in a row trip an alarm.

Alarms are not supported when Burst Logging is selected.

The following options are available for maintaining alarms and clearing alarms based on the following conditions:

<table>
<thead>
<tr>
<th>Alarm Reset Condition</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host has relaunched logger</td>
<td>Alarm remains visible on the LCD until the logger is relaunched.</td>
</tr>
<tr>
<td>Sensor reading within limits</td>
<td>Alarm clears once sensor reading returns to the normal range between the high and low alarm limits.</td>
</tr>
<tr>
<td>Cleared with button press</td>
<td>Alarm remains visible on the LCD until the Alarm/Stats button on the logger is pressed.</td>
</tr>
</tbody>
</table>

Internal Logger Events
USB-5100 Series loggers can track logger operation and status by recording the following internal events. You can plot these events in the USB-5100 Series software after reading out the logger and opening the data file.

<table>
<thead>
<tr>
<th>Event Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host Connected</td>
<td>The logger was connected to the computer.</td>
</tr>
<tr>
<td>Started</td>
<td>The Start/Stop button was pressed to begin logging.</td>
</tr>
<tr>
<td>Stopped</td>
<td>The logger received a command to stop recording data (from software or by pushing the Start/Stop button).</td>
</tr>
<tr>
<td>Button Up/But- ton Down</td>
<td>The Start/Stop button was pressed for 1 second.</td>
</tr>
<tr>
<td>Chan &lt;#&gt; Alarm Tripped</td>
<td>An alarm has tripped on that channel.</td>
</tr>
<tr>
<td>Chan &lt;#&gt; Alarm Cleared</td>
<td>An alarm has cleared on that channel. This event also contains the value that was furthest out of range for the sensor before the alarm cleared.</td>
</tr>
<tr>
<td>New Interval</td>
<td>The logger has entered or exited burst logging mode.</td>
</tr>
<tr>
<td>Safe Shutdown</td>
<td>The battery level dropped below 1.85 V; the logger performs a safe shutdown.</td>
</tr>
</tbody>
</table>
USB-5100 Series
Software Information

Reading Out and Plotting Data
After configuring a logger and logging data, users can stop the logger, save the data to file, and plot the data.

The USB-5100 Series software interface provides the following visual components when plotting logged data:

Points Table – Chronologically lists data points (values) and logged events displayed in the plot. The Points Table is linked to the graph – only the data for the series and events on the plot are listed in the Points Table.

Plot – The plot displays the data series and events in a graph, and includes a time axis (x-axis), value axis (y-axis), and legend for each series.

Details Pane – Shows device information, deployment information, and statistics for each series and event displayed in the plot.

Users can also use a context menu on the Details pane to show and hide a series on the plot and in the Points table.

Toolbar Icons – The toolbar includes icons that enable users to perform the following operations on the plot or on a specific series:
- show/hide gridlines, data point markers, legend, title, and border
- zoom in/out
- convert units
- create a filtered series
- several other graph/plot options
- add graph labels
- show graph at full scale

The USB-5100 Series software interface includes the Details Pane, which shows information for each series and event displayed in the plot; the Points Table, which chronologically lists data points and logged events; the Toolbar Icons that perform operations on the Plot or individual series; and the Plot, which displays the data series and events in a graph.
USB-5100 Series
Software Information & Specifications

Exporting Data
The data plotted and displayed in the Points Table can be exported to a .csv, .txt, or Microsoft Excel (.xls) file. Information in the Details Pane can be exported to a .txt file.

Saving to a Project File
Logged data along with any customized display and analysis settings can be saved to a custom project file.

Customizations made when the file was saved will display when you open the project.

Specifications
All specifications are subject to change without notice. Typical for 25 °C unless otherwise specified.

All USB-5100 Series Devices
These specifications apply to all USB-5100 Series sensors unless noted otherwise.

Operating Range
Logging: –20 °C to 70 °C (–4 °F to 158 °F); 0% to 95% RH (non-condensing)
Launch/Readout: 0 °C to 50 °C (32 °F to 122 °F) per USB specification
Logging Rate: 1 s to 18 h, 12 min, 15 s
Logging Modes: Normal, burst, or statistics
Memory Modes: Wrap when full or stop when full
Start Modes: Immediate, push button, date & time, or next interval
Stop Modes: When memory full, push button, or date & time
Restart Mode: Push button
Time Accuracy: ±1 min per month at 25 °C (77 °F) (see Plot A)

USB-5104
These specifications apply only to the USB-5104 thermocouple sensor.

Environmental (Internal 10k Thermistor (Temperature))

Range: –20 °C to 70 °C (–4 °F to 158 °F)
Accuracy: ±0.21 °C from 0 °C to 50 °C (±0.38 °F from 32 °F to 122 °F)
(see Plot A)
Resolution: 0.024 °C at 25 °C (0.04 °F at 77 °F)
(see Plot B)
Drift: <0.1 °C (0.18 °F) per year

Plot A: USB-5100 Series Time Accuracy

Plot B: USB-5104 Internal Temperature Accuracy and Resolution

Battery Life: 1 year, typ with logging rate of 1 min and logging interval of 15 s or greater
Battery Type: Two AAA batteries or non-rechargeable lithium batteries
Memory: 4 MB
- USB-5104: 1.6 million measurements, max
- USB-5106: 1.9 million measurements, max
Download Type: USB 2.0 interface
Full Memory Download Time: Approximately 1.5 min
LCD: LCD is visible from 0 °C to 50 °C (32 °F to 122 °F); the LCD may react slowly or go blank in temperatures outside this range
Size (L × W × H): 30.8 × 5.41 × 2.54 cm (4.25 × 2.13 × 1 in.)
Weight: 107.5 g (3.79 oz)
Environmental Rating: IP50
USB-5100 Series
Specifications

USB-5106
These specifications apply only to the USB-5106 temperature sensor.

Connected to Air/Water/Soil Temp Sensor (TMC6-HD)
The TMC6-HD measures temperature in air, water, or soil, and is attached to a 1.8 m (6 ft.) cable. This sensor can be plugged directly into the external input jacks of the USB-5106.

The TMC6-HD can be used indoors and underwater.
Connector Type: 2.5 mm plug
Temperature Measurement Range: -40 °C to 50 °C (-40 °F to 122 °F) in water; -40 °C to 100 °C (-40 °F to 212 °F) in air
Temperature Accuracy: ±0.15 °C from 0 °C to 70 °C (±0.27 °F from 32 °F to 158 °F), insert probe 2.3 cm (0.9 inches) min
Temperature Resolution: 0.002 °C at 25 °C (0.003 °F at 77 °F)

Drift: <0.1°C (<0.2°F) per year
Response Time in Air: 2 minutes typ to 90% in air moving 1 m/s (2.2 mph)
Response Time in Stirred Water: 30 sec. typical to 90%
Operating Range: Sensor tip and cable immersion in fresh water up to +50 °C (122°F) for 1 year
Sensor Housing: Copper-plated sensor tip
Sensor Dimensions: 5.1 x 33 mm (0.2 x 1.3 in.)
Sensor Weight: 34 g (1.1 oz)
Sensor Mounting Considerations: Mount the sensor where there is good air circulation for measuring air temperature, and mount the sensor tip as far off of the mounting surface as possible so temperature measurements are not affected by the surface itself.

Connected to a 4-20 mA Sensor (CABLE-4-20MA)
The CABLE-4-20MA connects a 4-20 mA output to a USB-5106. This sensor is attached to a 47 cm (18.5 in.) cable and can be plugged directly into the external input jacks of the USB-5106.

This sensor must be connected so that the current flows through, and with the proper polarity, as shown below. Do not expose to current above 20 mA or negative current. Do not cut off the end of the gray cable where it connects to the blue and yellow wires as that contains the precision resistor required for current measurements.

Connector Type: 2.5 mm plug
Measurement Range: 0 mA to 20.1 mA
Accuracy: ±0.001 mA ±0.2% of reading
Resolution: 0.3 µA
Length: 47 cm (18.5 in)

Connected to a DC Voltage Sensor (CABLE-ADAP.xx)
The USB-5106 supports the following voltage sensors:
CABLE-ADAP5: Supports sensor inputs of 5 VDC max
CABLE-ADAP10: Supports sensor inputs of 10 VDC max
CABLE-ADAP24: Supports sensor inputs of 24 VDC max
Connector Type: 2.5 mm plug (all voltage sensors)
Measurement Range
CABLE-ADAP5: 0 V to 5 V
CABLE-ADAP10: 0 V to 10 V
CABLE-ADAP24: 0 V to 24 V
Accuracy
CABLE-ADAP5: ±0.2 mV ±0.3% of reading
CABLE-ADAP10: ±0.4 mV ±0.3% of reading
CABLE-ADAP24: ±1.0 mV ±0.3% of reading
Resolution:
CABLE-ADAP5: 80 µV
CABLE-ADAP10: 160 µV
CABLE-ADAP24: 384 µV
Length: 1.9 m (6.3 ft) (all models)
Weight: 38.6 g (1.4 oz) (all models)
