USB-7000 Series
Multifunction OEM DAQ Devices

Overview
The USB-7000 Series multifunction DAQ devices are ideally suited for OEM and embedded applications.

The USB-7202 is a 16-bit DAQ board that provides 8 simultaneous analog inputs and 8 digital I/O bits. The USB-7204 is a 12-bit DAQ board that provides 8 single-ended or 4 differential analog inputs, 2 analog outputs, and 16 digital I/O bits.

Everything you need to begin acquiring, viewing, and storing data is included with USB-7000 Series devices, including comprehensive software support.

Analog Input
The USB-7202 has eight single-ended (SE) analog input channels. Each analog input features an A/D per channel for simultaneous sampling, 16-bit resolution, and input ranges up to ±10 V.

The USB-7204 can be configured with up to eight SE or up to four differential (DIFF) analog inputs. The USB-7204 provides 11-bit resolution in SE mode, 12-bit resolution in DIFF mode, and up to ±20 V input ranges.

Sample Rate
The USB-7202 has a 100 kS/s maximum rate (200 kS/s throughput rate to onboard memory with BURSTIO enabled). Both USB-7000 Series devices sample at up to 50 kS/s on any one channel.

Analog Output (USB-7204 Only)
Two 12-bit analog outputs are included with the USB-7204. Each output has a 0 V to 4.096 V range.

Features
- Eight analog inputs
- 12- or 16-bit resolution
- Up to 100 kS/s hardware paced throughput to host device
- Two analog outputs (USB-7204 only)
- Up to 16 digital I/O
- One 32-bit event counter
- No external power required
- Compact and stackable USB/104 form factor

Supported Operating Systems
- Windows 10/8/7/Vista® 32/64-bit
- Android™

Digital I/O
The USB-7202 provides one 8-bit digital port. Each bit is configurable for input or output.

The USB-7204 provides 16 digital bits configured as two 8-bit ports. Each port is configurable for input or output.

Counters
One 32-bit counter is included with each USB-7000 Series module. The TTL-level input has a 1 MHz max input frequency.

Calibration
USB-7000 Series devices are factory-calibrated. Specifications are guaranteed for one year. For calibration beyond one year, return the device to the factory for recalibration.

## Software Support

USB-7000 Series devices are supported by the software in the table below.

<table>
<thead>
<tr>
<th>Ready-to-Run Applications</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DAQami</strong></td>
</tr>
<tr>
<td>Data acquisition companion software with drag-and-drop interface that is used to acquire, view, and log data, and generate signals. DAQami can be configured to log analog, digital, and counter channels, and to view that data in real-time or post-acquisition on user-configurable displays. Logged data can be exported for use in Excel® or MATLAB®. Windows OS</td>
</tr>
<tr>
<td>DAQami is included with the free MCC DAQ Software bundle.</td>
</tr>
<tr>
<td>Install DAQami and try the fully-functional software for 30 days. After 30 days, all features except for data logging and data export will continue to be available – data logging and data export features can be unlocked by purchasing the software.</td>
</tr>
</tbody>
</table>

| **InstaCal**              |
| An interactive installation, configuration, and test utility for MCC hardware. Windows OS |
| InstaCal is included with the free MCC DAQ Software bundle. |

| **TracerDAQ and TracerDAQ Pro** |
| Virtual strip chart, oscilloscope, function generator, and rate generator applications used to generate, acquire, analyze, display, and export data. Supported features may vary by hardware. The Pro version provides enhanced features. Windows OS |
| TracerDAQ is included with the free MCC DAQ Software bundle. |
| TracerDAQ Pro is available as a purchased software download. |

## General-Purpose Programming Support

<table>

USB-7000 Series

Specifications

USB-7202
All specifications are subject to change without notice. Typical for 25 °C unless otherwise specified.

Analog Input
A/D converter type: 16-bit successive approximation type
Number of channels: 8 single-ended
Input configuration: individual A/D per channel
Sampling method: Simultaneous
Absolute maximum input voltage: CHx IN to GND; ±15 V max
Input Impedance: 100 MΩ min
Input ranges: ±10 V, ±5 V, ±2 V, ±1 V, software-selectable
Sample rate
Hardware paced: 0.6 S/s to 50 kS/s, software-selectable
BURSTIO to 32 kS FIFO: 20 S/s to 50 kS/s, software-selectable
Throughput
Software paced: 500 S/s all channels, system-dependent
Hardware paced: (100 kS/s) / (# of channels); max of 50 kS/s for any channel; max throughput scanning to computer memory is system-dependent
BURSTIO to 32 kS FIFO: (200 kS/s) / (# of channels), 50 kS/s max for any channel
Resolution: 16 bits
No missing codes: 15 bits
Crosstalk: Signal DC to 25 kHz: –80 dB
Trigger source: Software-selectable, external digital TRIG_IN
Calibration: Cal factors stored in firmware

Digital Input/Output
Digital type: CMOS
Number of I/O: 8 (DIO0 through DIO7)
Configuration: Independently configured for input or output; all pins are jumper-configurable for pull up/down with 47 kΩ resistors
Input high voltage: 2.0 V min, 5.5 V absolute max
Input low voltage: 0.8 V max, –0.5 V absolute min
Output high voltage (IOH = –2.5 mA): 3.8 V min
Output low voltage (IOL = 2.5 mA): 0.7 V max
Power on and reset state: Input

External Trigger
Trigger source: External digital, TRIG_IN
TRIG_IN is a Schmitt trigger input that is protected with a 1.5 kΩ series resistor
Trigger mode: Software-selectable for rising or falling edge
Trigger latency: 10 µs max
Trigger pulse width: 1 µs min
Input high voltage: 4.0 V min, 5.5 V absolute max
Input low voltage: 1.0 V max, –0.5 V absolute min
Input leakage current: ±1.0 µA

External Clock Input/Output
Pin name: SYNC;
SYNC is a Schmitt trigger input that is over-current protected with a 1.5 kΩ series resistor.
Pin type: Bidirectional
Software-selectable direction
Output: Outputs internal A/D pacer clock
Input: Receives A/D pacer clock from external source
Input clock rate: 50 kHz max
Clock pulse width: 1 µs min input; 5 µs min output
Input leakage current: ±1.0 µA
Input high voltage: 4.0 V min, 5.5 V absolute max
Input low voltage: 1.0 V max, –0.5 V absolute min
Output high voltage: IOH = –2.5 mA; 3.3 V min
No load: 3.8 V min
Output low voltage: IOL = 2.5 mA; 1.1 V max
No load: 0.6 V max

Counter
Pin name: CTR
CTR is a Schmitt trigger input protected with a 1.5 kΩ series resistor
Counter type: Event counter
Number of channels: 1
Input type: TTL, rising edge triggered
Input source: CTR screw terminal
Resolution: 32 bits
Schmitt trigger hysteresis: 20 mV to 100 mV
Input leakage current: ±1 µA
Input frequency: 1 MHz max
High pulse width: 500 ns min
Low pulse width: 500 ns min
Input high voltage: 4.0 V min, 5.5 V absolute max
Input low voltage: 1.0 V max, –0.5 V absolute min

Memory
Data FIFO: 32,768 samples, 65,536 bytes
EEPROM: 1,024 bytes
EEPROM configuration
0x000-0x1FF, reserved, 512 bytes system and Cal data
0x200-0x3FF, read/write, 512 bytes user area

Power
Supply current
USB enumeration: ≤100 mA
Continuous mode: 150 mA; this is the total current requirement, which includes up to 10 mA for the status LED.
+5 VUSER power available
Connected to self-powered hub or externally-powered root port hub: 4.0 V min, 5.25 V max
Output current: 300 mA max; this value is the total amount of current that can be sourced from the +5 V USER and digital outputs.

Environmental
Operating temperature range: 0 V to 70 °C
Storage temperature range: –40 to 70 °C
Humidity: 0% to 90% non-condensing

Mechanical
Dimensions (L × W × H): 90.17 × 95.25 × 12.70 mm (3.55 × 3.75 × 0.5 in.), 111.76 mm (4.40 in.) long with detachable screw terminals connected
USB cable length: 3 meters (9.84 ft) max
User connection length: 3 meters (9.84 ft) max

Measurement Computing (508) 946-5100
USB-7000 Series

Specifications

USB-7204

All specifications are subject to change without notice. Typical for 25°C unless otherwise specified.

Analog Input

A/D converter type: Successive approximation type
Input modes: Single-ended or differential (default)
Input voltage range for linear operation, single-ended mode: CHx to GND, ±10 V max
Input common-mode voltage range for linear operation, differential mode: CHx to GND, –10 V min, +20 V max
Configuration: Single A/D
Sampling method: Multiplexed
Absolute maximum input voltage: CHx to GND, ±28 V max
Input impedance: 122 kΩ
Input current:
  Vin = 10 V: 70 microamperes (µA) typ
  Vin = 0 V: –12 µA typ
  Vin = –10 V: –94 µA typ
Input current is a function of applied voltage on the analog input channels. For a given input voltage (Vin) the input leakage is approximately equal to (8.181*Vin – 12) µA

Number of channels: 8 SE / 4 DIFF, software-selectable

Input ranges
  Single-ended mode: ±10 V, G=2
  Differential mode: ±20 V, G=1; ±10 V, G=2 (default); ±5 V, G=4; ±4 V, G=5; ±2.5 V, G=8; ±2 V, G=10; ±1.25 V, G=16; ±1 V, G=20; software-selectable

Sample rate
  Hardware paced: 50 kS/s, software-selectable
  Throughput
    Software paced: 250 S/s typ, system-dependent
    Hardware paced: 0.596 S/s to 50 kS/s; max throughput scanning to computer memory is system-dependent.

Channel gain queue: Up to 16 elements, software-selectable channel and range

Resolution
  Differential: 12 bits, no missing codes
  Single-ended: 11 bits (shifted for 12-bit representation, even numbers only)
The AD7870 converter returns 11 bits (0-2047 codes) in SE mode, and 12 bits in DIFF mode. Firmware prior to version 2.04 have LSB-justified data. Firmware version 2.04 and later have MSB-justified data.

Integral linearity error: ±1 LSB typ
Differential linearity error: ±0.5 LSB typ
Repeatability: ±1 LSB typ

Trigger source: Software-selectable, external digital: TRIG_IN
Pacer source: Software-selectable; internal; external (SYNC), rising edge triggered; external Gated (SYNC); programmed IO

Calibration: Factory Cal factors stored in firmware. Cal factors must be applied using application software.

Note: Negative offsets result in a fixed zero-scale error or “dead band.” At the maximum offset of 9 mV, any input code of less than 0x009 does not produce a response in the output.
USB-7000 Series
Specifications and Ordering

Digital Input/Output

Digital Type: CMOS
Number of I/O: 16, (Port 0 bits 0 to 7, Port 1 bits 0 to 7)
Pull-up/down configuration: all pins jumper-configurable with 47 kΩ resistors.
Input high voltage threshold: 2.0 V max
Input high voltage limit: 5.0 V recommended max, 5.5 V absolute max
Input low voltage threshold: 0.8 V min
Input low voltage limit: 0 V recommended min, –0.5 V absolute min

Power
Supply current: 80 mA; the total current requirement includes up to 10 mA for the status LED.
+5 V USER power available
Connected to self-powered hub or externally-powered root port hub: 4.0 V min, 5.25 V max
Output current:
Connected to self-powered hub or externally-powered root port hub: 420 mA max; Connected to bus-powered hub: 20 mA max
The output current value is the total current that can be sourced from the +5V user output, analog outputs and digital outputs.

Environmental
Operating temperature range: 0 °C to 70 °C
Storage temperature range: –40 °C to 70 °C
Humidity: 0% to 90% non-condensing

Mechanical
Dimensions (L×W×H): 90.17 × 95.25 × 12.70 mm (3.55 × 3.75 × 0.5 in.), 111.76 mm (4.40 in.) long with detachable screw terminals connected
USB cable length: 3 meters (9.843 ft) max
User connection length: 3 meters (9.843 ft) max

Revisions D and later:
Input type: Schmitt trigger, 47 kΩ pull-down to ground
Schmitt trigger hysteresis: 0.6 V min, 1.5 V max
Input high voltage threshold: 3.1 V max
Input low voltage threshold: 1.0 V min
Output high voltage
IOH = –8 mA: 3.8 V min
No load: 4.4 V min
Output low voltage
IOL = 8 mA: 0.44 V max
No load: 0.1 V max

Counter
Pin name: CTR
Counter type: Event counter
Number of channels: 1
Resolution: 32 bits
Input frequency: 1 MHz max
High pulse width: 500 ns min
Low pulse width: 500 ns min
Input low voltage limit: 0 V recommended min, –0.5 V absolute min
Input high voltage limit: 5.0 V recommended max, 5.5 V absolute max

Revisions C and earlier:
Input type: Schmitt trigger, 1.5 kΩ series resistor
Schmitt trigger hysteresis: 20 mV min, 100 mV max
Input high voltage threshold: 4.0 V max
Input low voltage threshold: 1.0 V min
Input leakage current: ±1.0 μA

Revisions D and later:
Input type: Schmitt trigger, 47 kΩ pull-down to ground
Schmitt trigger hysteresis: 0.6 V min, 1.5 V max
Input high voltage threshold: 3.1 V max
Input low voltage threshold: 1.0 V min
