New High-Precision Thermocouple Measurement Device from Measurement Computing

NORTON, MA. – November 17, 2015 – Measurement Computing Corporation announces the release of the TC-32 high-precision thermocouple measurement device. The TC-32 features USB and Ethernet interfaces, 24-bit resolution for high-accuracy measurements, and includes a wide range of software support.

The TC-32 offers 32 thermocouple (TC) channels plus 8 digital inputs and 32 digital outputs/alarms. For larger systems, users can add the TC-32-EXP module to double the number of TC inputs (64), digital inputs (16), and digital outputs/alarms (64).

The TC-32 and TC-32-EXP are 19” rack mountable and feature easy-to-connect mini-jack connectors for all TC channels.

With digital alarming notifications when a temperature exceeds programmed limits, the TC-32 and TC-32-EXP offer the perfect solution for temperature monitoring applications including server rooms, refrigerated storage, and long-run test cells.

Microsoft Windows software options for the TC-32 includes DAQami and TracerDAQ® to display and log data, along with comprehensive support for C®, C++®, C#®, Visual Basic®, and Visual Basic .NET™. Support is also included for DASyLab® and NI LabVIEW™. UL for Android™ provides programming support for Android devices.

About Measurement Computing

Measurement Computing designs and manufactures data acquisition devices that are easy to use, easy to integrate, and easy to support. Included software options are extensive and provided for both programmers and non-programmers. Free technical support, one-year limited warranty, and low cost of ownership make Measurement Computing the easiest choice for DAQ.

More information about Measurement Computing is available at www.mccdaq.com.
